Isolation Gown Price Increase Notice

Dear Sir/Madam,

Currently the production capacity for isolation gown is reduced by 50% in China. Most domestic manufacturers for isolation gown are shifting their production capacity to produce the protective coverall. The main reasons are as follows:

The raw material price for isolation gown is greatly increased lately, but due to the low market price of isolation gown, manufacturers could not even cover the increased production cost and reluctant to keep the production for isolation gown.

Now the demand for protective coverall is very high, and the market price is nearly 4 times than the price of isolation gown, The high demand and profit drives the manufacturers put full production for protective coverall.

It is estimated that the production capacity for isolation gown will be further reduced in the upcoming one month. The price is bound to be increased sharply due to the serious shortage supply, and it is very hard to meet immediate delivery requirement.

We suggest all our customers to rush the hour to place the order at our current offer price, we can secure the supply for isolation gown for the upcoming one month at this price and meet your delivery requirement.

We have full control on the quality of these products from raw materials to the whole production process. We have our TQC team to control the quality and we have other ways to control the plant to follow our instructions.

Yours faithfully,

Dr Mark Shujun Ma
